

PRESS RELEASE

MOBILEGOV SECURES DOWNLOADED FILES WITH THE DIGITAL DNA

New patent application registration

Sophia Antipolis, September 28th, 2009 – As part of its innovation activities, **Mobilegov**, creator of the Digital DNA technology announces the registration of a new patent application which already protects a new applet: Mobilegov Document Control (MDC).

Within the context of the new French law called “Hadopi 2”, MDC offers a complementary approach to the securing of online downloads.

MDC ensures that Internet downloaded files, whatever their type is (text, image, audio, video) can only be utilized on the equipments (computer, mobile phone, USB stick, etc.) used to download them.

This technological innovation is an answer to many needs in the online information protection field, poorly satisfied nowadays:

- Sensitive or classified information, containing for example personal or confidential data
- Information protected by copyright, such as music, movies, books, magazines.

It can also provide innovative services:

- Limitation in time of use rights,
- Payment of fees based on usage: a user that is watching a video on his computer could pay a fee lower than it would pay to see the same document on its home system,
- Protection of magazines, specialized studies, confidential documents or information so that their heirs can control distribution, prohibiting their replay by authorized recipient.

« This technological innovation will make Mobilegov enter in a new era of digital documents security. These documents will become as sure as paper documents before colour photocopiers appeared. MDC will be part of the Mobilegov catalogue before the end of year 2009. Its marketing is organised through our certified partners Mobilegov on all territories where the company operates. A retail offer might be launched on the Internet for the public. said Michel Frenkiel Chairman of the company.

Facing the increase of hacking and the growing need for secure digital documents, this brand new application provides a concrete answer to this problem related to all forms of digital creation existing in the industry (music, video, video games, etc.).

About Mobilegov :

IT security software editor

Mobilegov is an IT security software editor. The company was founded in 2004. Its purpose is to provide its customers solutions de protect their sensitive data and to authenticate their users. These solutions are based on the Digital DNA, a technology protected by international patents which exploit the identification of the used equipments.
