

MOBILEGOV: SUCCESSFUL CAPITAL INCREASE

Sophia Antipolis, April 6th, 2010 – Mobilegov, innovative IT security software editor, announces the success of its capital increase of 544,704 € which according to the legislation has been reserved to qualified investors.

New technologies developed by Mobilegov during the year 2009 allowed providing web players with a new product. It is an efficient solution to secure accesses, simple to implement and not expensive for the website. Mobilegov has created its own appliance to enable a fast deployment of this solution, the “Mobilegov Digital DNA ID Box” that can be integrated into the website in a “plug and play” way which significantly reduces the Mobilegov engineer involvement for each software installation.

Millions of websites are currently very poorly secured as they are only protected by a “login / password”. More and more users are victim of hacking and identity theft. In response to the spectacular development of these frauds, the implementation of additional security becomes a priority for both e-commerce websites and community websites. Security reinforcement can be brought by a physical strong authentication factor . The “Mobilegov Digital DNA ID Box” solves this issue.

As proof of concepts installed for prospects have doubled since the beginning of the year, Mobilegov needs to stock up on “Digital DNA Mobilegov ID Box” appliances. This induces unforeseen investments. Before ordering, the clients insist on seeing a proof of concept running in their IT environment and network. Therefore, this new market penetration requires significant investments.

Michel Frenkiel, Chairman of Mobilegov, declares: “Despite the difficulties we met fixing new products, generating important delays in the 2009 turnover achievement, the major historical shareholders who joined Mobilegov during its IPO in 2008 have renewed their confidence in the company’s future by taking part to the capital increase. Top managers and executives of the Company have participated up to 36% of the transaction which has enabled the creation of 136,176 new titles”.

More information on the “Mobilegov Digital DNA ID Box”:

The Mobilegov Digital DNA Box is an appliance which contains an ID Quantique random card and a VIA PADlock Security Engine in addition to a processor, storage space and all necessary system and application software. These elements provide an unusual level of security in web servers.

About Mobilegov: **IT security software editor**

Mobilegov is an IT security software editor. Its purpose is to provide its customers solutions to protect their sensitive data and to authenticate their users. These solutions are based on the Digital DNA, a technology protected by international patents which exploits the identification of the used equipments.
